**ABSTRACT:**

PROBLEM TO BE SOLVED: To easily confirm the content of a sub-display displaying information on the history of a game, etc., by fixing an operation panel on the front surface of a housing 2, disposing a main display means over the operation panel and placing a sub-display means within the operation panel.

SOLUTION: This slot machine 1 houses a main

display (main display means) 7 in the center of the front surface of a main body 3, the operation panel is disposed under it and this operation panel is provided with an insertion part 10, an operation part 20 and a sub-display part 30. The part 10 is provided with a slot space 11, and a medal insertion port 12 and a paper slit insertion port 13 are integrally formed at this. The part 30 is provided with a sub-display (sub-display means) 31 consisting of a liquid crystal panel and four penetrate- operable push button switches 32 to 35 arranged along the lower edge of this display 31 to display the limit values of a playing amount and time and the record, history, etc., of the game.
